

To ensure high levels of Customer Service the entire Supply Chain needs to be tracked and managed. It is no longer enough to end the process when the goods have left the warehouse.

Whether you need to handle a customer claim that a delivery was never made or need to know the progress being made on a delivery route or the status of a specific order being delivered, a Proof of Delivery (POD) system will close that information gap.

DeliveryExpert™ leverages the latest in mobile and web technologies to provide an easy, accurate and up to the minute way to track, manage and optimize this final link in the Supply Chain.

DeliveryExpert™ uses a handheld mobile device that lets you verify tracking numbers at point of delivery and collect signatures. This information is then transmitted to the organization's server where you can instantly view all delivery information and track delivery status by truck/route (or any other view) in real time.

Some Key features of **DeliveryExpert™**

- Supports any Windows Mobile unit
- Barcode Document Search*
- Digital Signature Capture*
- Real Time Search and Updates
- Server Side Real Time Dashboard
- View Delivery Progress by Route/Truck
- Drill Down - View Delivery Detail and Signature
- Metrics and Performance Indicators
- Friendly User Interface

* If supported by the mobile device

DeliveryExpert™ lets you capture information about what was delivered, when it was delivered, where it was delivered, and who signed for it.

DeliveryExpert™ turns the data collected in the field into a real time picture of the delivery status across multiple views and multiple resolutions

DeliveryExpert™ will optimize your Delivery operations resulting in greater efficiency and improved customer service while saving you time and money.

DeliveryExpert™ will provide an advanced level of visibility and tracking that can greatly benefit companies with private fleets, third party logistics companies or parcel and package delivery services.

DeliveryExpert™ is available as a standalone installation that will extend warehouse visibility or fully integrated into the SCEExpert™ execution suite, thus providing feedback into the whole Supply Chain

The Supply Chain Execution Platform

SCEExpert™ Suite

SCEExpert™ is a suite of integrated products that can be individually deployed, modified or combined as needed based on your business requirements.

The SCEExpert™ Suite consists of the following offerings:

WarehouseExpert™	Real Time Warehouse Management
